Title of Article: An experimental Study of the Fertility Behaviour in South West Nigeria,

Authors: Akinboye, J.O. and Alao, A.A.

Date of Publication: 1997

Abstract:

The study evaluated the impact of an educational film on the fertility and health behaviour of selected Yoruba speaking communities in South West Nigeria. A field controlled experiment was utilized with 5 treatment groups and 5 controlled groups. Intact population units was adopted in the experimental sites and the mean age of participants was 38 years. Results indicated differences between the experimental and control groups in fertility behaviour. Clinic attendance for family planning also increased as a result of projection of the film.
