Title of Article: Using Computer Technology for Educational and Occupational Information.

Authors: Alao, A. A., Ojo, S. O. and Forcheh, N.

Date of Publication: 2009

Abstract:

This chapter in book focused Computer Technology (CT) in Botswana and its usage for educational and occupational information. The results indicate that the use of PC in seeking information was higher among female subjects compared to male subjects. With reference to web-based learning, more subjects in the technical/professional level, followed by the administrative/managerial level had used the PC for this purpose. Also, more male subjects compared to female subjects had used PC for web-based learning and more male subjects had also used the PC for job application when compared to the female subjects. The use of PC for job application was highest for subjects in the age range 26-35 years.
