Abstract: Information and Communication Technology (ICT) is regarded as a driver and enabler of economic development in the era of globalization. The study examines the state of ICT infrastructure in African countries in comparison with the rest of the world in the process of using e-commerce to compete in the digital age. The study used the INEXSK approach in making the comparison using selected ICT indicators. The results show that African countries have attain certain level of ICT Infrastructure but these is not substantial enough to enable them be a participant and compete favourably in this digital age.
