Date:

Abstract: The study examines how far the tiers of governments in Nigeria have performed regarding residential housing and environmental development based on their vision, mission and capacity by comparing the achievements of various regimes in the areas of housing of residential housing provision and sustenance of the environment. The study found out that there is need for the society at large to stop threatening its own life support systems as well as the lives and livelihoods of its members through unorthodox practices. The paper concludes by recommending to policy makers the need to carry out and publishing their achievements as well as outstanding environmental being faced by the government.
